

## SUPPLEMENTARY TABLE

Supplementary Table S1 - Records of *L. pertusa* living colonies documented in the literature for the Mediterranean Sea and that explicitly reports the geographic coordinates (source). References that report the occurrence of living colonies but not refers the sampling/observing location are not included.

Original Start Longitude	Original Start Latitude	Original End Longitude	Original End Latitude	Record Date	Location	Structure	Station	Source

## SUPPLEMENTARY FIGURES

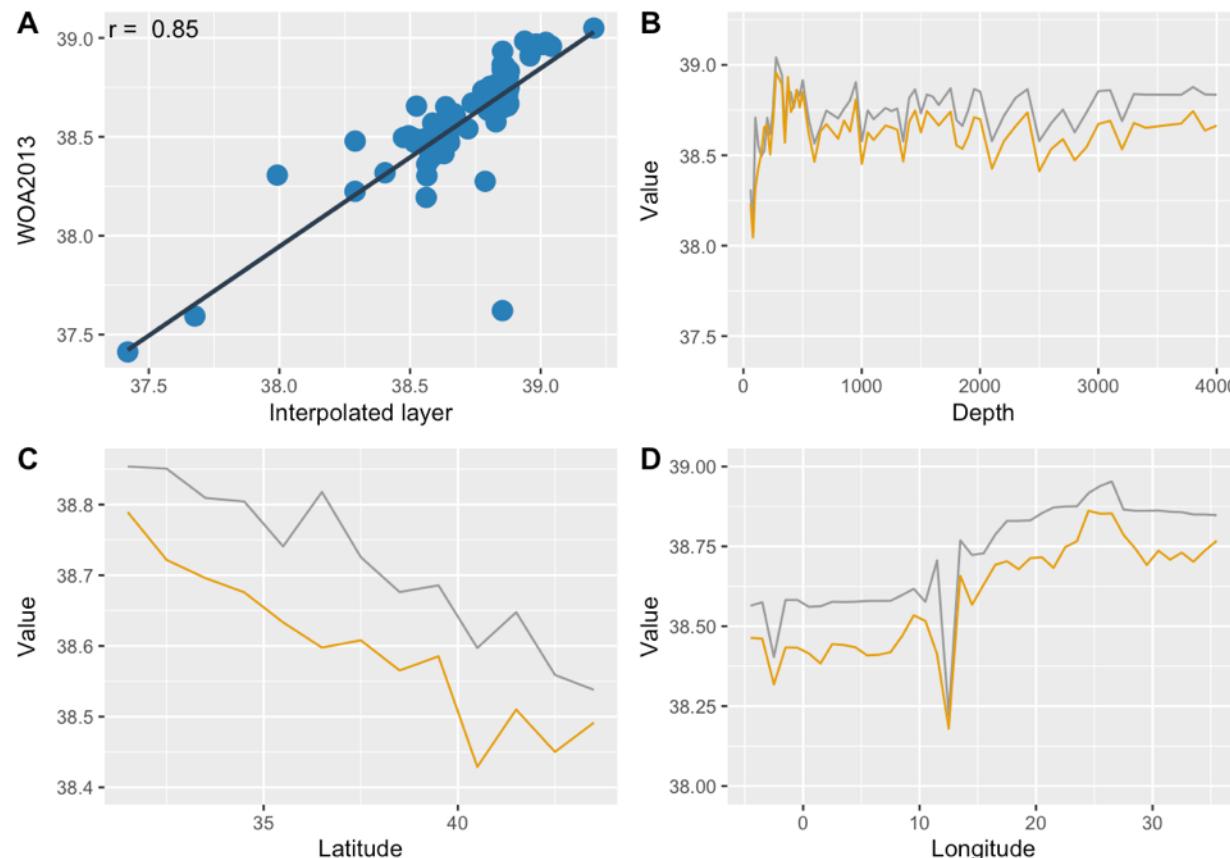

Supplementary Fig. S1 - Variables correlation using information extracted from 10000 randomly distributed data points across the modelling area.

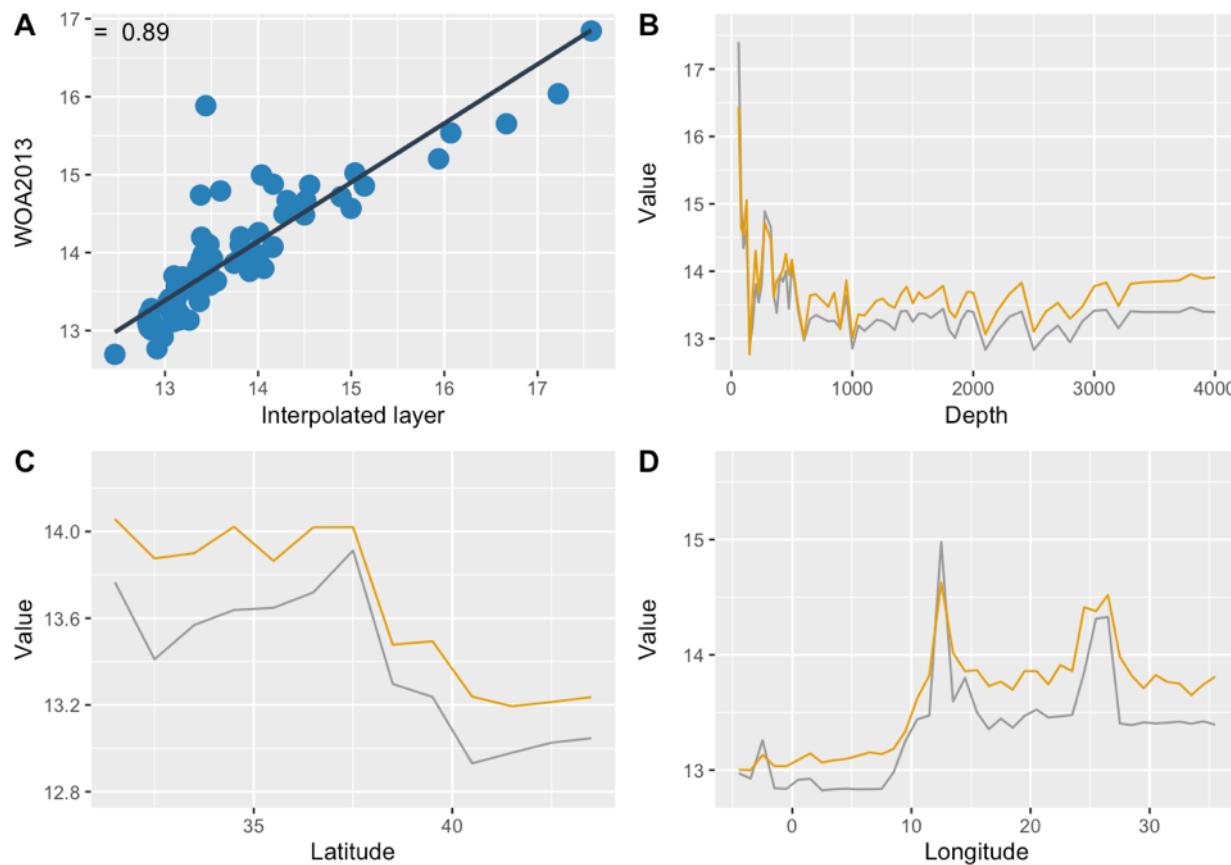

Supplementary Fig. S2 - Marine protected areas with restrictions to fishing activities according to the MPAtlas of the Marine Conservation Institute.

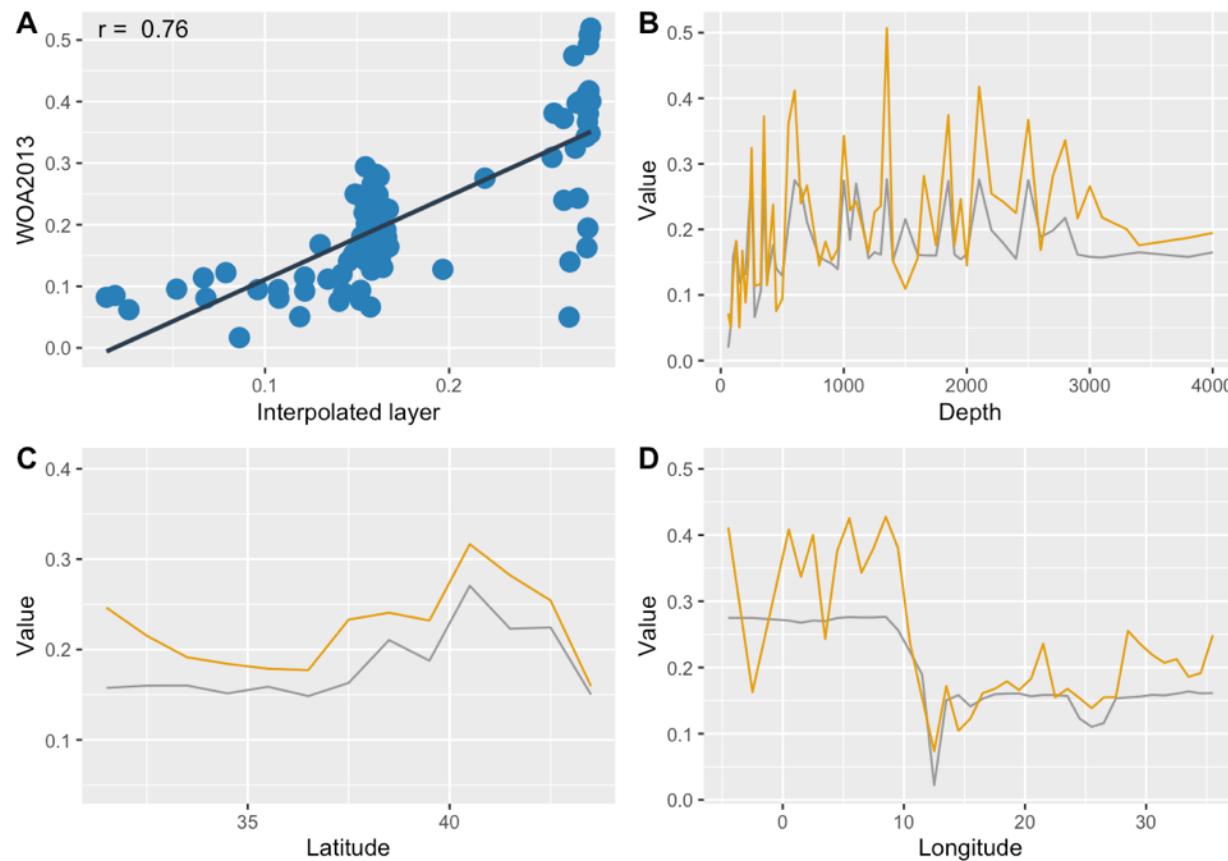

Supplementary Fig. S3 - Predictors environmental variability across the Mediterranean Sea.

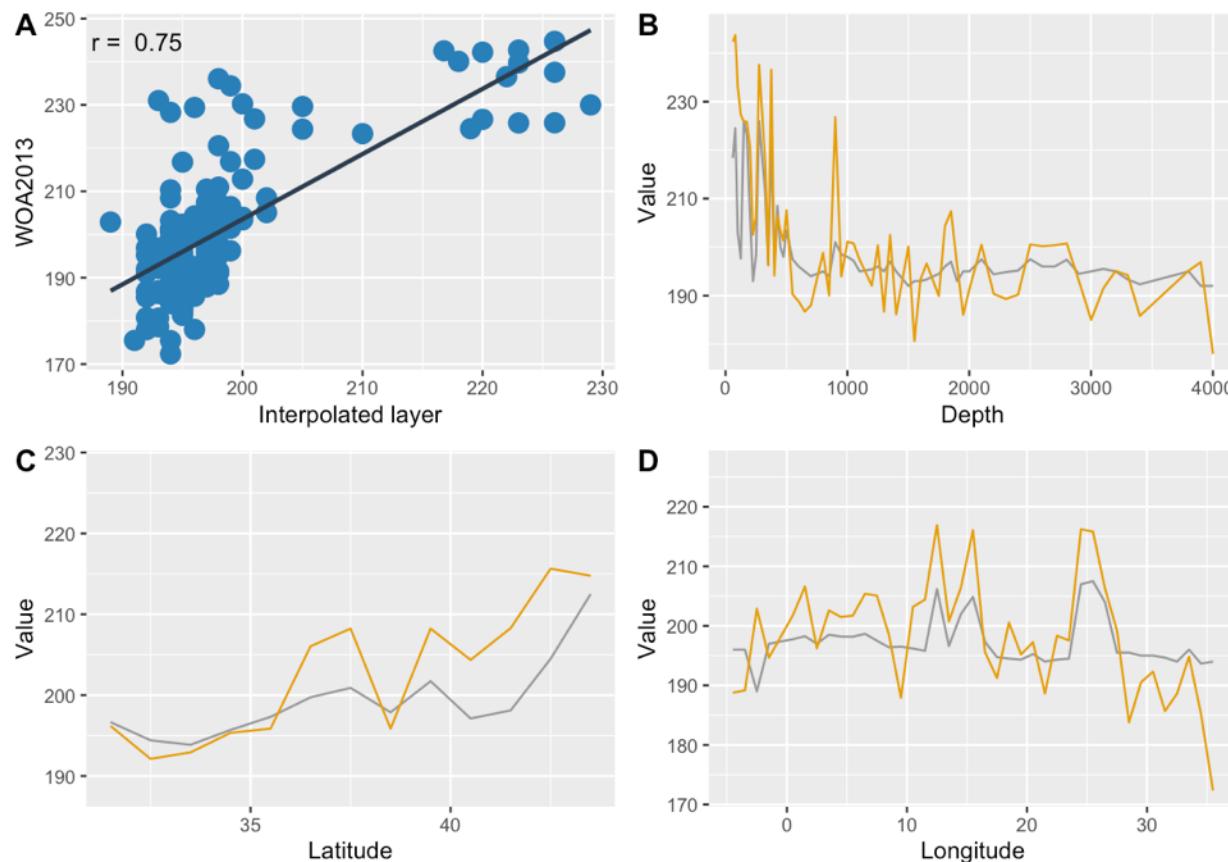

Supplementary Fig. S4 – Validation of the interpolated mean salinity layer for the Mediterranean Sea. A) Correlation ( $0.85, n = 175, p < 0.001$ ) of intersected data from WOA 2013 (version 2) with the interpolated data layer, B) mean salinity relationships at depth in 1 m bins, C) mean salinity at latitude in  $1^\circ$  bins and D) mean salinity at longitude in  $1^\circ$  bins. The yellow lines are mean salinity at each WOA 2013 station; the grey lines are the value of the environmental layer at the position of each WOA 2013 station.

Supplementary Fig. S5—Validation of the interpolated mean temperature layer for the Mediterranean Sea. A) Correlation ( $0.89, n = 179, p < 0.001$ ) of intersected data from WOA 2013 (version 2) with the interpolated data layer, B) mean temperature relationships at depth in 1 m bins, C) mean temperature at latitude in 1° bins and D) mean temperature at longitude in 1° bins. The yellow lines are mean temperature at each WOA 2013 station; the grey lines are the value of the environmental layer at the position of each WOA 2013 station.

Supplementary Fig. S6 – Validation of the interpolated mean phosphate concentration layer for the Mediterranean Sea. A) Correlation ( $0.76, n = 152, p < 0.001$ ) of intersected data from WOA 2013 (version 2) with the interpolated data layer, B) mean phosphate relationships at depth in 1 m bins, C) mean phosphate at latitude in 1° bins and D) mean phosphate at longitude in 1° bins. The yellow lines are mean phosphate at each WOA 2013 station; the grey lines are the value of the environmental layer at the position of each WOA 2013 station.

Supplementary Fig. S7 – Validation of the interpolated mean dissolved oxygen concentration layer for the Mediterranean Sea. A) Correlation ( $r= 0.75$ ,  $n = 151$ ,  $p < 0.001$ ) of intersected data from WOA 2013 (version 2) with the interpolated data layer, B) mean dissolved oxygen relationships at depth in 1 m bins, C) mean dissolved oxygen at latitude in 1° bins and D) mean dissolved oxygen at longitude in 1° bins. The yellow lines are mean dissolved oxygen at each WOA 2013 station; the grey lines are the value of the environmental layer at the position of each WOA 2013 station.
